About Cleft lip and palate

Early in pregnancy, different parts of the face form and come together just above the top lip. If this doesn't happen quite as it should, the result is a gap or 'cleft' in the upper lip, the palate (roof of the mouth), or both. It's usually caused by a mix of genetic and environmental factors interacting in a way that can't be predicted or prevented. A cleft can affect feeding, hearing, speech, teeth placement and more. The treatment pathway can last 20+ years, including several surgeries.

Around one in 700 people are born with a cleft – that's 1,200 each year in the UK alone.
